

Building 61D

Excavation of the electrical substation located at The Peninsula at Bayonne Harbor began on June 13, 2005 and was completed earlier this month. The substation, which supplies power to the Peninsula, occupies nearly 4500 sq. ft. is enclosed by a chain link fence. Conducted by AWT Environmental Services, Inc. with oversight provided by Excel Environmental, the work included excavation of approximately 1,500 tons of soil and installation of a two-foot thick Engineered Stone Cap both within and around the main electrical substation.
